TECHNICAL FRAMEWORK

Fort Collins Chamber Lunch n' Learn Presents:

What Do Hackers Know About Us?

Implementing cyber defense systems in your organization is a step forward but far from sufficient when it comes to knowing your vulnerabilities. The only way to know how a hacker can get in is to think like one. In this presentation, Al Harris will show you startling ways that hackers gather information on you and your company.

Founded in 2010, Technical Framework provides managed secure IT services for small- and mid-sized companies. Our goal is to provide the best service experience in the areas of IT helpdesk, system design and implementation, preventive maintenance, and strategic consulting.

Lunch will be provided.
