

# Carbon Health is a groundbreaking national healthcare provider with a mission to make high-quality healthcare accessible to everyone

At Carbon Health, we believe that every person deserves good health. This philosophy is the foundation of our proprietary technology platform, which helps eliminate barriers to healthcare. We believe in meeting people where they are, to provide seamless, personal care — all without paying a premium. And we believe that healthy people create strong communities and flourishing societies.

## Now

70-plus locations across the country.

Virtual care available to more than 75 percent of the U.S. population.

## Future

150 locations across the U.S. in 2021; 1,500 across the U.S. by the end of 2025.

Virtual care available across the country.

## What Makes Us Different

**Our approach to care.** We meet people where they are, delivering high-quality healthcare in the way that's most convenient for them.

- **Clinics:** Our classic brick-and-mortar locations, designed for comfort and convenience.
- **Mini health clinics:** Unique to Carbon, these small-scale care sites enable us to provide the last mile of care, bridging in-person primary and virtual care. We can deploy them rapidly where they are needed most, at a low cost.
- **Virtual visits:** We offer video appointments via a HIPAA-compliant communications platform.
- **Carbon Health app:** Designed with patients and providers in mind, our app provides secure clinical communications and access to medical records.
- **On-site at employers:** Carbon partners with businesses and governments for both COVID-related and full primary and urgent care services.

**Our technology.** We have built a full-stack platform that enables our patients to completely customize and optimize healthcare delivery to meet their needs. Our technology allows us to operate more efficiently than legacy health providers, effectively lowering the cost of care.

**Our transparency.** Whether it's by explaining fees upfront, clear communication through our app, or sharing our expertise through blog posts, Q&As, and in-person interaction, we believe in providing clear information to help people make informed decisions, to make it easy to navigate our products and services, and to reduce complexity.

**Our agility.** We aren't limited by traditional healthcare clinic models. We work safely and securely from vans, mobile units, mini health clinics, tents, brick-and-mortar locations, video, and more.

**Our scalability.** Due to our technology and agility, we can scale rapidly to meet the needs of our partners, customers, and patients. In fact, we increased our number of employees by more than 500 percent and more than tripled our number of access points in the past year in order to do so.

## Our Services

Carbon Health offers in-person and virtual care for people at every stage of life, whether they have a health concern or are simply taking care of themselves with routine checkups.

- [Primary Care](#) (overall wellness, including preventive care and care for chronic conditions)
- [Urgent Care](#)
- [Women's Health](#)
- [LGBTQ+ Health](#)
- [Mental Health](#)
- [On-site imaging and labs](#)

Carbon Health also provides all of these services through our enterprise solution, Carbon for Business — creating customized healthcare packages for businesses and government entities, to meet the needs of their staff or residents.

## COVID-19 focus

Carbon Health pivoted early in 2020, redirecting resources to address the COVID-19 pandemic through patient-focused services such as testing, COVID Positive Care for people who tested positive, and vaccinations. In addition, Carbon Health provided enterprise-focused services like COVID Ready, which helped businesses get back to work safely. Carbon Health has also administered more than 1 million doses of the COVID-19 vaccine, in partnerships with local governments like the City of Los Angeles.
